

MAL3ABY

Project Idea:

MAL3ABY is a smart sports court booking platform that brings searching, comparing, booking, and payment together in one place. Users can choose their preferred sport - Football, Tennis, or Padel - and set their location to find the nearest available courts. They can easily compare courts based on prices, available times, distance, ratings, photos, and court condition before making a booking.

Project Overview

The Problem

Currently, booking a sports court can require users to:

- Search for courts through Google Maps or social media.
- Contact court owners through phone calls or WhatsApp.
- Ask about available times and prices.
- Check several courts separately to compare.

. Confirm availability before going to the court.

**This process can be time-consuming, inconvenient,
and difficult to compare.**

Our Solution

**MAL3ABY brings the entire process into one
organized platform.**

**Instead of searching across different platforms
and contacting multiple court owners, users can
find nearby courts, compare their options,
choose an available time, and complete their
booking online.**

Project Objectives

- **Simplify Sports Field Booking**

Provide users with a fast, easy, and organized way to search for and book football, tennis, and padel courts online.

- **Help Users Find the Best Nearby Fields**

Use location-based services to show users the nearest available sports fields and help them compare locations, prices, ratings, and available time slots.

- **Provide a Convenient Online Booking & Payment Experience**

Allow users to check real-time availability, select their preferred time, confirm their booking, and pay online securely.

- **Create an All-in-One Sports Platform**

Integrate an online sports store where users can purchase sports equipment, clothing, and accessories alongside their field reservations.

- **Improve Sports Facility Management**

Help field owners manage their facilities, schedules, bookings, prices, and customer information through an organized management system.

- **Increase Accessibility to Sports Activities**

Make it easier for individuals and groups to discover, compare, and book suitable sports facilities based on their location, budget, and preferred time.

Project Scope

- **Sports Field Booking System**

Develop an online system for booking football, tennis, and padel courts, including available time slots and booking confirmation.

- **Location-Based Field Search**

Allow users to find nearby sports fields based on their current location, with filtering by sport, distance, price, rating, and availability.

- **Online Payment System**

Provide secure online payment options that allow users to complete their bookings quickly and conveniently.

- **Sports Equipment & Clothing Store**

Integrate an e-commerce section where users can browse and purchase sports equipment, clothing, shoes, and accessories.

- **Field Management & User Dashboard**

Provide dashboards for users and sports facility owners to manage bookings, schedules, prices, orders, and other relevant information.

Final Deliverable

A complete web-based sports platform that allows users to:

- Search and book **football, tennis, and padel courts** across different sports clubs and facilities.
- Find **nearby available sports facilities** using location-based search.
- Compare **prices, availability, ratings, and previous user reviews** before booking.

- Make **individual or group bookings** and invite friends to join a game.
- Create or join **sports teams** and find players for different sports activities.
- Complete **online booking and secure payment** through the platform.
- Access **offers, discounts, and special promotions** from sports facilities.
- Browse and purchase **sports equipment, clothing, shoes, and accessories** through the integrated sports store.
- Explore additional services available at clubs, such as **cafés and recreational activities**.
- Manage bookings, orders, teams, friends, reviews, and personal information through a dedicated **user dashboard**.
- Provide sports facility owners with a **management dashboard** to manage courts, schedules, bookings, prices, offers, and customer information.

The final product will be a **user-friendly, responsive, and integrated sports platform** that combines sports field booking, team formation, social features, online payments, and sports e-commerce in one place.

فيها حجز ملاعب + متجر + فرق + تقييمات + دفع، **Web Platform** بما إن المشروع عبارة عن:
فالأفضل تكون الخطة مقسمة من التحليل لحد الاختبار والتسليم

Project Plan (5 Weeks)

Week 1 — Research & Project Planning

- Analyze the target users and competitors.
- Define project requirements and main features.
- Define user roles: customers, sports facilities, and administrators.
- Create the information architecture and user journey.
- Prepare the project structure and database requirements.

Week 2 — UI/UX Design

- Create wireframes for the main screens.
- Design the home page, sports fields, booking, and payment screens.
- Design the sports store, products, cart, and checkout pages.
- Design user profile, bookings, teams, reviews, and offers pages.

- Create a consistent visual identity and responsive design system.

Week 3 — Front-End Development

- Develop the responsive website interface.
- Implement sports field search, filtering, and location-based results.
- Build the field details, availability, and booking interfaces.
- Develop the sports store, product listing, cart, and checkout interfaces.
- Implement user accounts, teams, reviews, offers, and booking management.

Week 4 — Back-End & System Integration

- Develop the database and connect it with the platform.
- Implement user authentication and account management.
- Develop the booking and availability management system.
- Integrate online payment functionality.
- Implement facility management, orders, reviews, teams, and notifications.

Week 5 — Testing, Optimization & Final Delivery

- Test all major features and user flows.
- Fix bugs and improve system performance.
- Test responsive design on different screen sizes and devices.
- Conduct security and usability checks.
- Deploy the final platform and prepare the project documentation and presentation.
